Ray/Stephanie:

This e-mail from Jay Nickerson arrived earlier today. Hill is going to provide hard copies of full-size drawings. These drawings are draft and can't be sealed until final approval is provided by EPA. And it shouldn't be an issue with NJDEP review of the permit equivalents.

I thought that you'd be interested in the tone of Mr. Risila's e-mail per our previous discussions of NJDEP cooperation and review of RM 10.9 RA submittals.

Thx,
Bill P.

Jay, if it is a hard copy of the draft Final Design report that Dave needs, we will provide that. The applications and the design report are complementary... they are in agreement with each other. As indicated in the documentation, the no dredge zone is an offset for the Jersey City water supply line.

I'll call you later if there is a need to discuss.

Stan

Hello Jay -

I am still reviewing this & the Permit Eq. app.

A few things that jump out at me are:

1. I need Full size, signed sealed hard copy plans of the FINAL DESIGN- I can't review this w/ plans online & the permit Eq. I have doesn't have the same (revised) stuff in the Final Design Doc. This was a concern I voiced way back.. having to work from two document sets which are different .
2. Question about "No Dredge Areas" shown in the middle of the work area? I didn't note an explanation of this - gather its due to submerged infrastructure - cables., pipes. Etc. It should be addressed - also its not on the Permit Eq. App but is on the Final Design, again two different documents .. should I throw the Permit Eq away?

By end of next week I hope to have my review completed. But absent the hard copy plans I'll likely need to get those and review again resulting in additional info requested/
